

CL90 je patentirana avtomatična naprava za dezinfekcijo smol v mehčalnih napravah. CL90 je popolnoma avtomatičen, se z lahkoto doda vsem mehčalnim napravam, ne glede na avtomatizem regeneracije (časovni ali volumetrični) in ne glede na vrsto uporabljenega ventila (elektromehanskega ali elektronskega).

Uporabljen visoka tehnologija in inovativnost doseženih rešitev sta združeni v napravi z odličnimi dosežki. S številnimi preizkusi je zagotovljena dolga življenjska doba naprave za dezinfekcijo smol.

CL90 avtomatsko proizvaja klor (v elektrolitski celici), med regeneracijo mehčalne naprave. Količino doziranja je možno regulirati oz. prilagoditi zahtevam različnih mehčalnih naprav. Svetlobni indikator sveti, ko naprava proizvaja klor in se avtomatično ugasne, ko se regeneracija konča.

Glavne značilnosti naprave CL90:

- **Popolnoma avtomatično delovanje**
- **Regulacija proizvodnje klora**
- **Svetlobna signalizacija dezinfekcije**
- **Možnost vgradnje na večino mehčalnih naprav**
- **Brez dodatnih kemikalij**

CL 90i is a patented device to sterilize the resin bed of the softeners. CL 90i is fully automatic, it can be easily put on any softener regardless of the control valve, electromechanical or electronic, volume or time controlled.

Naturally it can be easily put on any softener even already installed and on service.

The high tech contents of this equipment and its new planning of working make this device really exclusive. The long and rigorous running test, simulating several years of service, warrant dependability and long wear

CL90i automatic produces chlorine, by means of an electrolytical process, during the regeneration of the softener.

CL 90i is fully automatic: the chlorine production starts at the simple flow of the brine trough it.

The quantity of chlorine produced is electronically adjustable in a wide range of values, in order to fit the equipment to sterilize the resins bed of different size of softeners, up to 350 liters of resins, assuring a perfect sterilization of the resins.

CL 90i shows, by a light signal, that the production of chlorine features. The light signals automatically turns off when the production stops.

Main features are:

FULLY AUTOMATIC WORKING REGARDLESS OF THE CONTROL VALVE.

ADJUSTABLE QUANTITY OF CHLORINE PRODUCED.

LIGHT VISUALIZATION OF THE STERILIZATION.

APPLICABLE TO ALL SOFTENERS EVEN ALREADY ON SERVICE AND REGARDLESS OF AUTOMATIC CONTROL

NO CHEMICAL
